

# Adding Cabinetry to a 2018 XLR Boost 27QB

*by Gary L Mace*

This article is just to show how we added some storage space to the door side of our 2018 XLR Boost 27QB toy hauler trailer. The space under the window was unused so I added some narrow custom made cabinets. Depending on what "toy" you are hauling, this space may or not be available to use. We haul a GL1800 Goldwing Motorcycle most of the time and sometimes a Polaris Ranger 400HO side by side and this cabinet does not interfere with either.

The tall section has several shelves. I simply left the outlet and cut a hole to access it. This shelf is handy as a charging station for small devices. The section under the window I made sliding doors. I added some heavy foam to bottom of that area and it is the perfect soft storage area for our laptop computers. Sorry, no dimensions, just some photos to share the idea with you. If you have the skills to build it, using a tape measure will not be an issue for you. 😊
